

Kumo Vibration Certification System

Up to 8 Channels. Real Time. Programmable.

SensOS' Kumo Vibration Certification System is the most cost-effective Solution in the market for shop or field real-time machine monitoring especially for long tests on motors, gearboxes, generators and more.

The fully programmable Kumo measures vibration in real-time and records both scheduled and above-threshold readings to provide end user with a complete report that includes Spectra and trends.

Kumo is a plug and play system enclosed in a rugged case ready to be taken anywhere.

Additional Options include up to 8 channels, warning Signal Lights, Tach readings, Coastdown and more.

Features

- **Scheduled Measurements**, up to once per minute.
- **Real-Time data**, TWF, Acceleration and Velocity Data.
- **Customizable**, Add your logo, Change Channel name and measurement scale.
- **Automated Reports**, including spectra for every scheduled or occurrence reading and trend for the duration of the test.
- **Multi-Channel**, up to 8 channels.
- Use Single Axis or Triaxial Sensors.
- **Upgradeable**, Coast-Down/ Run-Up Tests available.
- **Windows-Based**.
- Compliant with EASA AR-100 and NEMA Standards.
