

Multisens - 2234

Route Data Collector and Inspections

Collect Data your Way.

The Multisens-2234 App is the culmination of years of experience and feedback from maintenance professionals. Get away from vibration-centric, generic solutions that do not provide the full picture of your asset's health, instead do Visual Inspections, Vibration, Thermography, Ultrasound together or individually.

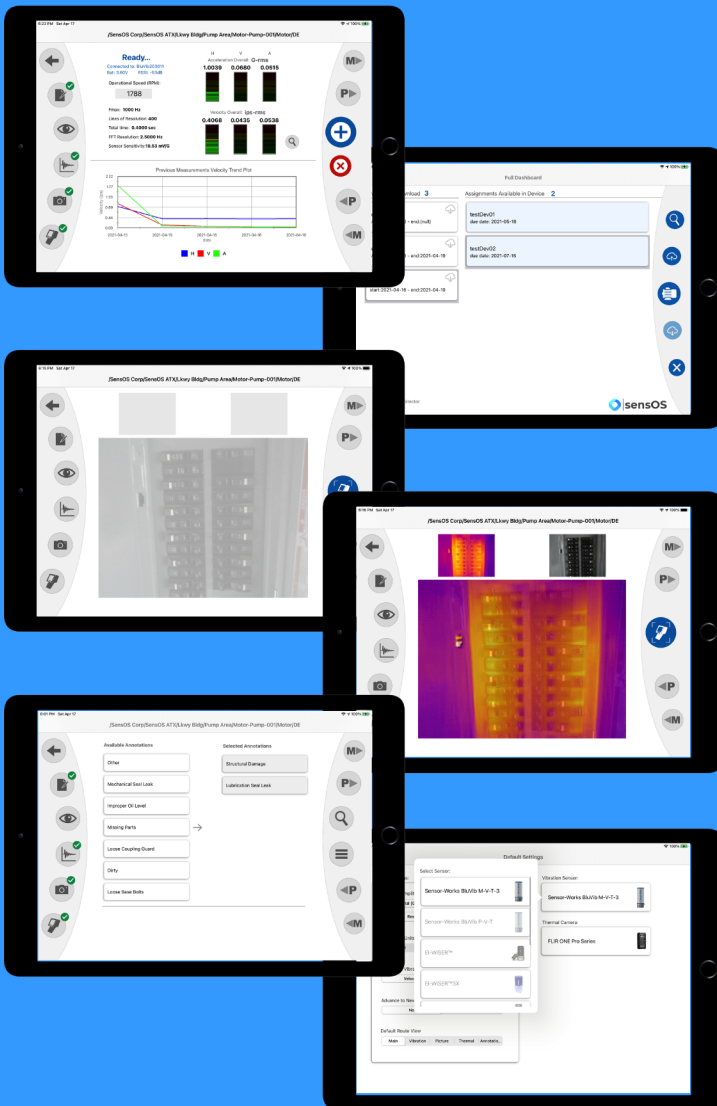

Like all SensOS solutions, sensor selection is based on your needs, never again limit your program to a single brand of sensor or get locked into expensive, outdated hardware.

Elevate your program by embracing IIoT with the MultiSens line of products

Key Features

- Single/Triaxial Vibration Data Collection.
- Download/Upload Data while online and continue using if offline.
- Use SensOS' WebApp to create unlimited number of levels for hierarchies and machine templates
- Collect off-route Data.
- Perform Thermal imaging with previous image reference.
- Perform Visual Inspections with Pictures and Annotations.
- Open collected data and perform further analysis using MultiSens-3934.
