

Multisens - CM Sensors TestDrive

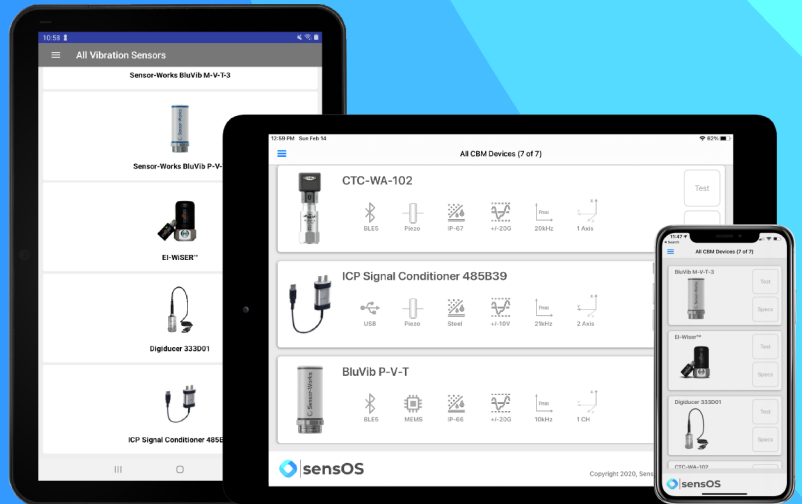

iOS - 1234 / Android 1233

Test. Compare. Decide

With so many sensors to choose from in the marketplace: Vibration, Thermography, Ultrasound and more. It's a challenge deciding which one suits your needs.

Multisens-1234 was developed to give end-users a tool to test and compare sensor technologies without having to make long term Predictive Program commitments.

Our App and our team of experts can work with you and potential sensor suppliers to determine what sensor works best in your operating environment.

Ask your sensor supplier to participate in TestDrive.

Key Features

- Test Sensor Technologies from leading brands.
- Side by Side comparison of sensor features.
- Mix and match all available technologies.
- Developer and User rating in the App
- Available in iOS and Android Platforms

When ready to take your Predictive Maintenance Program to the next level consider using the rest of SensOS' family of customizable solutions:

Multisens - 3934:

Stand alone App with all the features needed for a full Vibration Analysis in a portable, user friendly and low cost application

Multisens Predictive Online Platform:

Our Sensor Agnostic platform for permanent mount condition monitoring and Route Data Collection with state of the art Visualization, Analysis and Diagnostic techniques in a fully customizable package that looks and feels like your own.
